

Allergy Sufferers May Now Safely Vacuum!

Enviro-Clean Paper Bags

Capture and Contain Over 99% of All Allergens as Small as 0.1 Micron!

Unhealthy particles, especially those that are respirable, are less than 10 microns in size. The smaller the size, the more dangerous the particle, because it can penetrate deep within the lung. Biopollutants, i.e. dust mites, pollen, fungi, and bacteria of all sizes are also of concern. Most vacuums can effectively remove particles as small as 1 micron in size; the Enviro-Clean Uprights from **CleanCraft** can remove and contain sub-

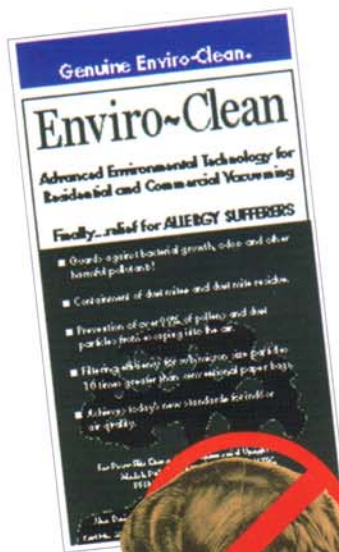

micron size particles. People who are allergic to these pollutants should not vacuum (and may even need to leave the area while vacuuming is occurring) with a conventional filter vacuum. With the Enviro-Clean Commercial Upright Vacuums, allergy sufferers are able to vacuum without exposure to airborne pollutants. The Enviro-Clean System will prevent 99% of all pollen and dust particles from escaping into the air.

The Enviro-Clean Bag combines a standard paper layer with a non-woven electrostatically charged air filter inner lining formed of melt blown microfiber webbing. Amazing, but True... 10 Times Greater Filtering Efficiency than Conventional Vacuum Paper Bags!

Filtering Efficiency 10 Times Greater than Conventional Vacuum Paper Bags

- Prevention of over 99% of pollens and dust particles from escaping into the air.
- Containment of dust mites and dust mite residue.
- Provides relief for allergy sufferers.
- Retention of particles as small as 0.1 micron. (1 micron equals 0.00004") or Approximately 1/25,000 of an inch.
- Filtering efficiency for sub-micron size particles 10 times greater than with conventional paper bags.

FILTERING EFFICIENCY SELECTIVE FILTRATION PROPERTIES
